

How to License Altium Designer 6 - Step by Step - by HSB

This is the license generator for Altium Designer 6
(tested on build 5028 and 5229 build should work on other builds as well).

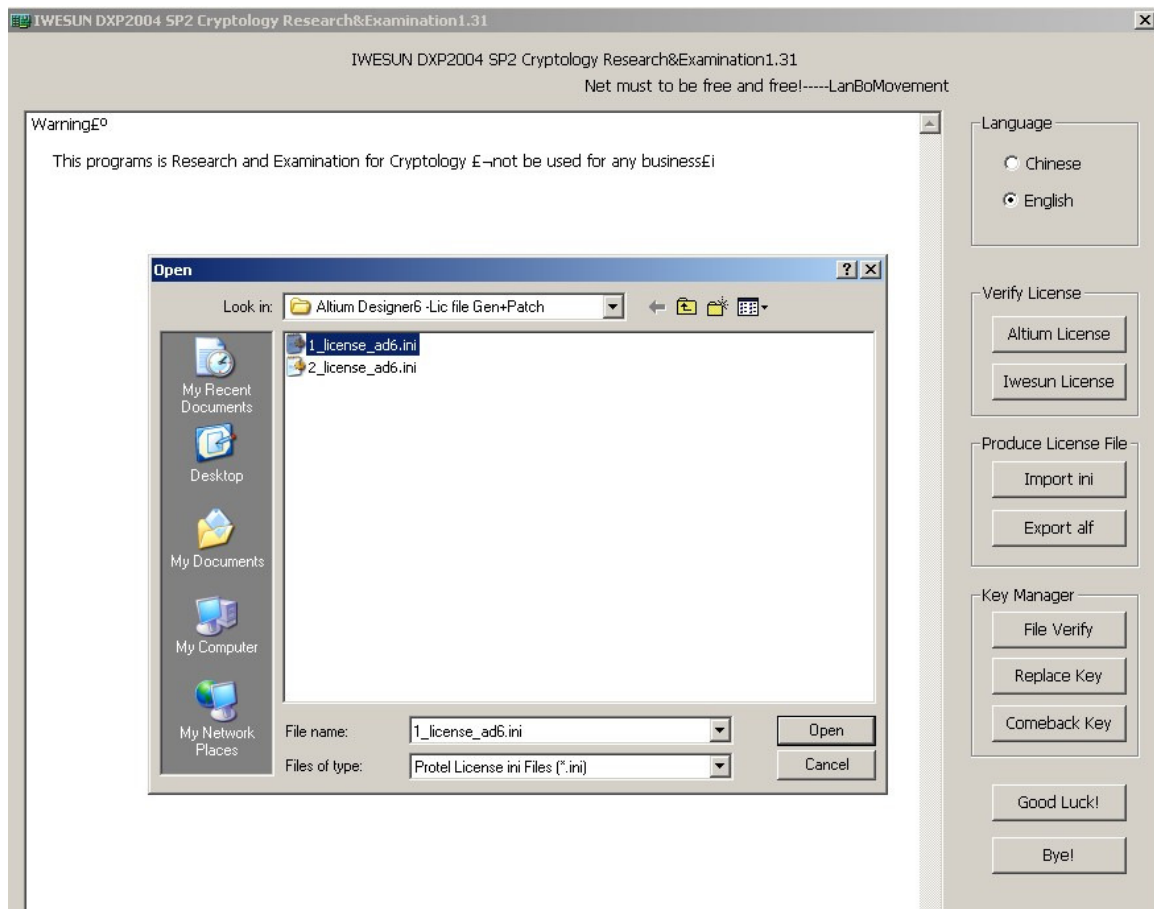

Step 1 - (It is optional)

Open *license*.ini(it have ver. 1 or 2-I used 1) with Notepad and edit parameters - for example Your Name.

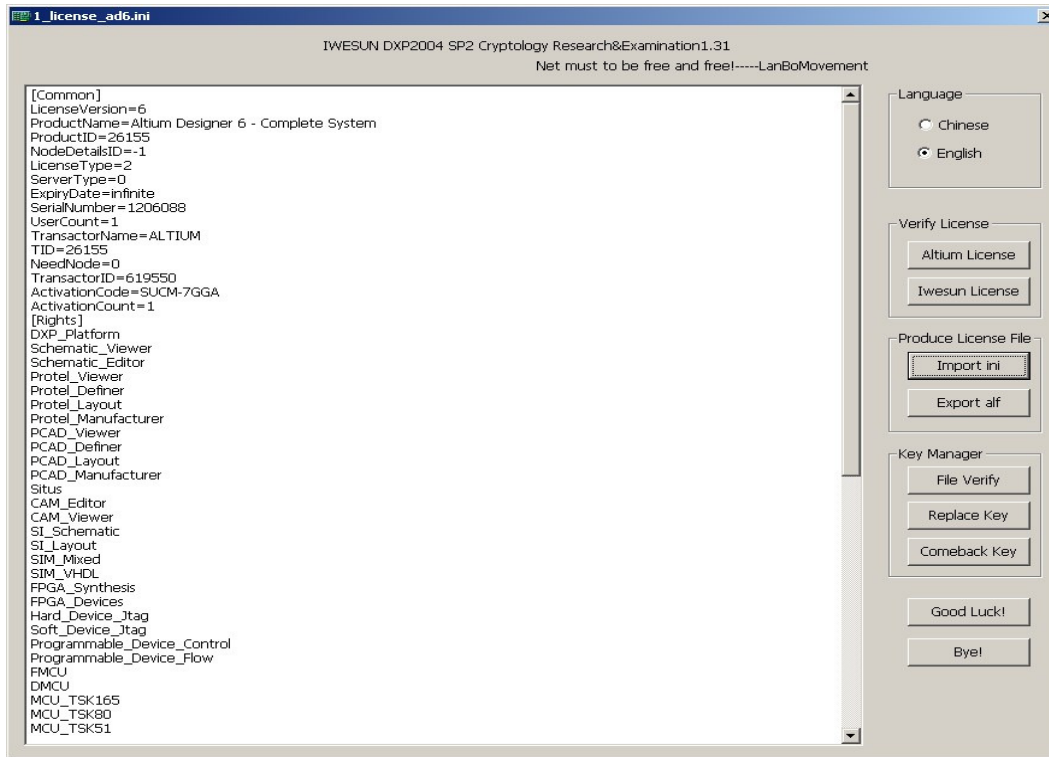

If you don't know what to do and what some options means then don't edit anything.

2. Use Altium Designer6 alf file generator.exe to generate valid alf license file for AD6.

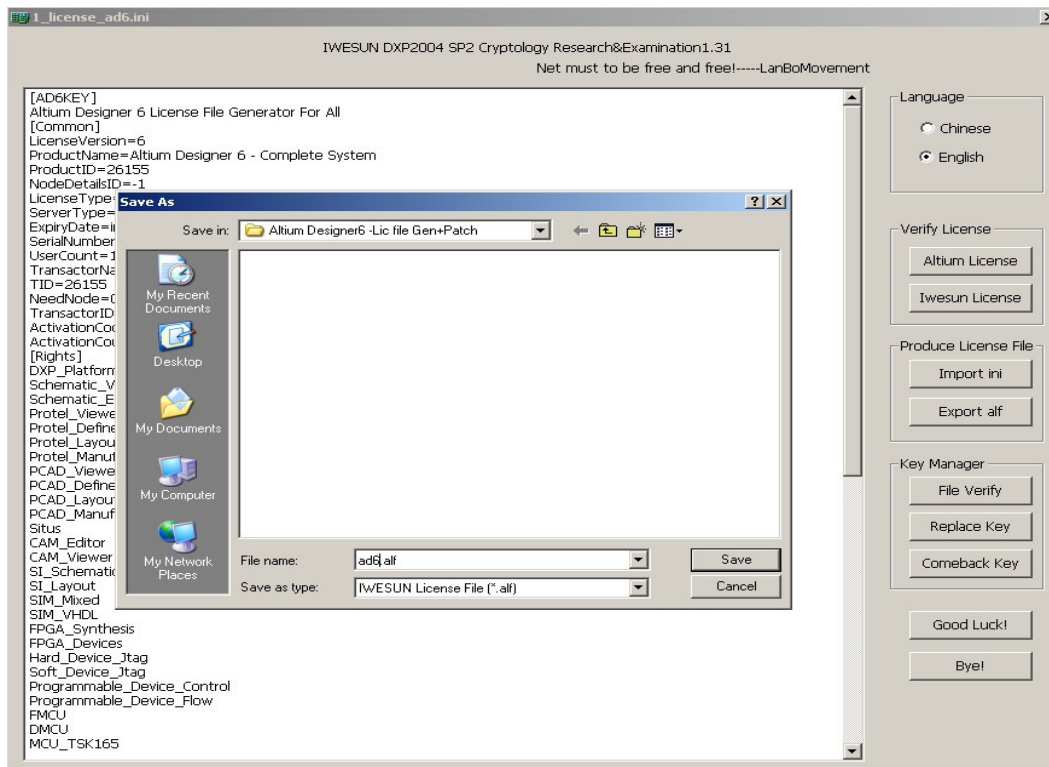

- a) - open and after that chose English(or in case that you are ok with Chinese language ☺ you can use it like it is)
- b) Import *license*.ini file

c) After import of ini it luck so

d) Export alf file-yours valid license file for AD6

3. Put license.alf into Altium Designer 6 installation directory. Usually C:\program files\altium designer 6
4. Use Altium Designer6 - DXP file patch.exe filr to patch the DXP.exe
DXP.exe is usually here - C:\program files\altium designer 6
5. -Optional- go on license manager of AD6 - just to see what is written for your AD6 license - if all is ok - license is infinite and for all applications .

Enjoy!

Rem. -I found in net another patch files for patching DXP.exe .If they work or not- no idea.
Upper way was tested with AD6 - 5028 and work 100%. License manager show infinite license for all features of Ad6.

P.S

Ако някои не може да си го прочете на Английски то просто не за тая работа.Така че си спестявам описанието на български.
