

[Koda] Staff – Freelance Assignments – March 2021

Role 1: Embedded SW Developer – Gothenburg – 12 month contract (extendable)

Long term, inhouse project for a customer of ours delivering a large ECU to a global OEM. We are looking for people to start as soon as possible and end of April is the absolute latest start date. Up to 5 openings for this position, ranging in seniority from 3 years to 12+.

Requirements:

- Experienced embedded C developers (3+ years)
- Experience working with AUTOSAR and/or ISO26262 functional safety standards.
- If no experience with ISO26262, working with safety critical systems in other industries would be highly valued e.g. medial, aeronautic, etc.

Advantageous:

- Teams in this project are cross-functional, so any experience with automated testing and robot framework is highly valued.
- Python experience highly advantageous also.

Role 2: Senior Test Developer / Team Lead – Lund – 6 month contract (extendable)

Our customer is looking for an experienced SW Verification Lead Engineer with developer background (or developer with testing/verification background) to strengthen their Android System application, Service and framework team, with the ambition to grow into a key member of the team.

Requirements:

- Relevant Master of Science in Engineering degree
- 5+ years of experience in verification leadership
- Deep knowledge of automation and building automation infrastructure.
- Skilled in Java.

Advantageous:

- Android Experience
- Proficient in a Unix/Linux environment
- Git/Gerrit experience
- JUnit expert
- Mocking expert
- Confluence
- Jira

Role 3: C/C++ Developer – Stockholm – 6 month contract (extendable)

Long term, extendable assignment looking for an experienced SW developer who has a strong background, and interest, in working close to the HW.

Requirements:

- Several years' experience of Low-level driver
- C/C++
- Git, Gerrit
- Embedded Linux
- Fast, open, innovative, team player
- Swedish citizen (no dual citizenship) due to security clearance protocols.

Role 4: System Product Developer (5G) – Remote (must be in Sweden) – 12 month extendable contract

Our Client is looking for **5+ developers** to strengthen their 5G NR development in the Traffic Control (TC) area.

Developers are requested for the 5G Sub6 Program which drives, specifies and systemize advanced 5G NR L3 Traffic Control.

The work is the core of the development activity in creating TC SW functionality for the their 5G radio base stations.

Requirements:

- Specifically, the team members need to be able to take on roles as system developers and senior system developers capable of 5G feature development, this to accelerate the feature progress in the area of 5G NR to regain technology leadership.
- The team member must have strong background in telecom system product development.
- The systemization tasks also require good 3GPP radio access standardization knowledge.

Role 5: Android Automotive Developers (x4) – Lund – 12 month contract (extendable)

For one of the Car Multimedia teams in Lund we need software engineers who will be part of the client's work with Android Automotive for the client's Infotainment Systems.

Specifically, there are work-packages associated with audio on a Qualcomm system running QNX hypervisor. Knowledge about the Android hardware abstraction layers and connection to QNX are highly valued as well as experience of Audio routing/control, Android framework (AOSP) including audio frameworks, automotive Linux systems. C/C++ programming skills is a must. We work in an Ubuntu development environment using GIT/Gerrit and Jenkins for continuous integration.

Role 6 – Embedded Developer (BLE Connectivity) – Lund – 6 month contract (extendable)

This role is focused around feature development for a cellular connected device including smart algorithms, power efficiency and Bluetooth Low Energy.

Requirements:

- Good experience with Embedded SW Development
- Experience with Cellular modem standards
- Experience with Bluetooth standard and implementations
- High level of competence with Software bring-up and debugging of embedded systems.

Role 7: System Engineers/Architects – Linköping – 12 month contract (extendable)

Our customer in Linköping is looking to hire system developers/architects to join a number of different teams focusing on separate automotive systems.

Requirements:

- 10+ years' experience working on system development, engineering or architecture.
- Automotive experience is highly valuable.
- Experience working to ISO26262 functional safety standards.
- Accustomed to working in agile projects
